

[name](#)[synopsis](#)[description](#)[options](#)[commands](#)[xenial \(1\) sic.1.gz](#)Provided by: [sic_1.1-5_amd64](#) 

NAME

```
sic - simple irc client
```

SYNOPSIS

```
sic [-h <host>] [-p <port>] [-n <nick>] [-k <keyword>] [-v]
```

DESCRIPTION

sic is an extremely fast, small and simple irc client. It reads console input and prints all server output to standard output. It multiplexes traffic into one output, that you don't have to switch different channels, actually a feature.

OPTIONS

-h <host>

Overrides the default host (irc6.oftc.net)

-p <port>

Overrides the default port (6667)

-n <nickname>

Override the default nick (\$USER)

-k <keyword>

Specifies the keyword to authenticate your nick on the host

-v

Prints version information to standard output, then exits.

COMMANDS

:j #channel

Join a channel

:l #channel

Leave a channel

:m #channel/user msg

Write a message to #channel/user

:s #channel/user

Set default channel/user

Everything which is not a command is simply send the server.
